

Psychedelic Altered Conscience

Yet another experimental exploration of Hard Entheogenesis.
Hard Yacker about Hard Yakka.

The Purpose of Psychedelics

Terence McKenna

“My idea – my notion of what the psychedelic experience is for is that we each must become like fisherman and go out on to the dark ocean of mind and let your nets down into that sea and what you are after is not some behemoth that will tear through your nets, foul them and drag you and your, your little boat, you know, into the abyss, nor are what we looking for a bunch of sardines that can slip through your net and disappear, ideas like have you ever noticed that your little finger exactly fits your nostril and stuff like that.

What we are looking for are middle-sized ideas. That are not so small that they are trivial and not so large that they are incomprehensible. But middle sized ideas that we can wrestle into our boat and take back to the folks on shore and have fish dinner.

And every one of us when we go into the psychedelic state this is what we should be looking for, its not for your elucidation, it's not part of your self directed psychotherapy, you are an explorer and you represent our species and the greatest good you can do is to bring back a new idea.

Because our world is endangered by the absence of good ideas, our world is in crisis because of the absence of consciousness and so to whatever degree any one of us can bring back a small piece of the picture and contribute it to the building of a new paradigm then we participate in the redemption of the human spirit and that after all is what it's really all about.”

Terence McKenna, 1946-2000, “The Purpose of Psychedelics”.

The compound conceptual hallucinogen **QIQ-EC2C-CHOMSKY** represented as a tab, table, tablet of Acronym, normally insufflated via the optic nerve.

Attention Conservation Notice: None, and this lecture is particularly relevant to all serious psychonauts, ardent entheonauts and environmentally and socially aware recreational users.

Keywords: Psychedelia, Entheogenesis, God, Alterant, Shulgin, Scale, Parental, Consciousness, Archetype, Conscience, Bootstrap Induction, Governance, Winter, Global, Village, Survival, Conference, Stewardship, Responsibility, Calibration, Measurement, Titration, Hard, Core, Drug, Nerds

Abstract: This Class-**A** (**A** for **Acronymic**) compound conceptual hallucinogen is designed to significantly potentiate and modulate the chemical psychedelic experience to produce non-trivial entheogenic qualia in the experienter.

Firstly a conceptual hallucination is a hallucination about the nature of concepts, secondly, they are insufflated through the optic nerve such as what the reader is doing now, thirdly, they come on at the speed of thought, but only if you have the discipline to pay attention.

THOR'S MDMA HAMMER's (AKA: QIQ-EC2C) aim is true, it's quick and easy to see how to wield it with courage and love, it may not look much on paper, but nor does a tab of Lysergic acid diethylamide 25 prior to dosing.

It is a non-delusional, fully psychedelic, pure textual entheogen.

Be not alienated by the Acronyms, the textual **Acronymic States of Consciousness (ASC)** are tools to marshal your attention, order your thoughts, focus your mind and stabilise your presence in the Altered States of Consciousness, induced by Chemical Psychedelics.

During the course of the lecture we will examine each component of the **THOR'S MDMA HAMMER** conceptual hallucinogen, and what they could and should mean in the cultivation of competent conscience as the first things first, things that matters basis as a consequence of the iterated dosings of chemical psychedelics over the course of one's life-time, in the development of non-trivial baseline entheogenesis.

Note, also, that the cultivation of non-trivial baseline entheogenesis can also be achieved simply by dosing on this compound conceptual hallucinogen alone.

Thus these are Doctor's orders: to apply this strong medicine to the psychedelic experience to examine and refine your own self-driven non-trivial baseline entheogenesis.

This Planetary System requires a lot of home-work, and as a consequence of this lecture home-work will be self-assigned and self-marching orders given, and there will be lecture notes to take home to study.

Prior to the lecture it is strongly recommended to download and familiarise yourself with study resources available at these URLs: <http://qiq-ec2c.net> <http://undergrowth.org/qiq-ec2c>

Please note that what follows in this 20pp lecture handout that you are reading at EGA 2011, is composed of substantially abridged lecture notes. A full set of lecture notes and related study material can be downloaded from this website: <http://qiq-ec2c.net> after the conference for further study.

What is contained in these substantially abridged lecture notes, however, is sufficient for coherent further study within the circumstances and context of the EGA 2011 conference environment.

THE ALTERED SHULGIN SCALE (ASS)

Towards a measure of Entheogenic Qualia.

PLUS / MINUS (+/-) The level of effectiveness of a drug that indicates a threshold action. If a higher dosage produces a greater response, then the plus/minus (+/-) was valid. If a higher dosage produces nothing, then this was a false positive.

PLUS ONE (+) The drug is quite certainly active. The chronology can be determined with some accuracy, but the nature of the drug's effects are not yet apparent.

PLUS TWO (++) Both the chronology and the nature of the action of a drug are unmistakably apparent. But you still have some choice as to whether you will accept the adventure, or rather just continue with your ordinary day's plans (if you are an experienced researcher, that is). The effects can be allowed a predominant role, or they may be repressed and made secondary to other chosen activities.

PLUS THREE (+++) Not only are the chronology and the nature of a drug's action quite clear, but ignoring its action is no longer an option. The subject is totally engaged in the experience, for better or worse.

PLUS FOUR (++++) A rare and precious transcendental state, which has been called a 'peak experience', a 'religious experience,' 'divine transformation,' a 'state of Samadhi' and many other names in other cultures. It is not connected to the +1, +2, and +3 of the measuring of a drug's intensity. It is a state of bliss, a participation mystique, a connectedness with both the interior and exterior universes, which has come about after the ingestion of a psychedelic drug, but which is not necessarily repeatable with a subsequent ingestion of that same drug.

If a drug (or technique or process) were ever to be discovered which would consistently produce a plus four experience in all human beings, it is conceivable that it would signal the ultimate evolution, and perhaps the end, of the human experiment.

Please note that the "Altered Shulgin Scale" is neither an implicit nor an explicit critique of the celebrated psychedelic research chemist Alexander Shulgin and his life's work and love, it is it something entirely orthogonal.

The Shulgin Rating Scale (**SRS**) is a simple, pragmatic, scale for reporting the subjective effect of psychoactive substances at a given dosage, and at a given time. We will also refer to the SRS as the “Standard Shulgin Scale” (**SSS**)

The system was developed for research purposes by the American biochemist Alexander Shulgin and detailed in his book **PIHKAL** (*Phenethylamines I Have Known And Loved: A Chemical Love Story*), 1991.

Usage: Shulgin Ratings typically include four components. An identification of the chemical being ingested, a dosage, and a descriptive narrative including the ratings themselves used to describe various moments in time. The chemical itself must be clearly identified, preferably using chemical nomenclature, as opposed to popular or “street” names.

The dosage must be known and communicated, as substances may result in wildly different ratings at different doses. The rating itself gives a comparable value relating to the subjective intensity of the experience, including auditory, visual, emotional, mental, physical and other sensory effects. The narrative may include various Shulgin ratings, noting the time to achieve various levels.

Shulgin created the “Shulgin Scale” as a pragmatic and compact measure and notation to assist with the myriad and profligate research in psychedelic analogues that has been and is his life’s work. Whilst useful for the calibration of psychedelic experiences, it is of limited applicability to the calibration of entheogenic experiences, that subset of psychedelia that pertains to God realisation. An “Altered” “Shulgin Scale” is proposed, to address such limitations.

This is not a critique of the SSS per se, neither explicitly nor implicitly. It is a well known measure and a handy notation to assist journaling experiences and bio-assays in the field, indeed the pragmatic practicality is reflected in the notation used – when the field researcher cannot write numeric symbols any more, in the moment, at least they can write a sequence of “**x**” which is a “**+**” rotated 45 degrees.

However the question does arise as to whether the SSS is useful for measuring the Entheogenic Qualia (qualities) of an experience – particularly from the perspective of a third-party observer of an psychedelic experienter.

The problem is not with the Shulgin Scale, per se, but rather that what “Entheogenesis” is, is somewhat vaguely defined, there is no “ISO Standard Entheogenesis” (**ISE**).

However, in practice, practical Entheogenesis is largely baseline entheogenesis, in terms of, first things first, things that matter, pragmatic outcomes for the wise and sagacious stewardship of this planet, it is difficult to think of a more important aspect or quality of the concept of “Entheogenesis” to focus on than that. So the question arises, as to how to co-join, correlate or yoke, baseline entheogenesis to chemical entheogenesis and also how to measure it. What is proposed is an augmentation, or alteration of the Standard Shulgin Scale, a so-called “Altered Shulgin Scale”, or **ASS** for short.

The Altered Shulgin Scale (ASS) is formally defined, calibrated and calculated as follows:

Definitions: An Individual Session (**IS**) is a period of time during which one or more psychoactives are taken. It is individual since the psychonaut does not further reduce the experience into discrete sub-sessions. The research psychonaut might regard a six hour session ingesting mescaline as an individual session. Whereas party psychonauts might define an Individual Session as the time they depart for a weekend Bush Doof until the time

they return home and the cocktail of psychoactives partaken during the weekend are all included. An Individual Session can also be thought of as *Indivisible* Session.

The Individual Session Acknowledgment (**ISA**) is a donation or tithing of money set aside for the assistance of **DSAPI-ACO's** – Drug Sense And Psychedelic Intelligence Active Conscience Organisations and related cognate initiatives. When sufficient ISA's have been accumulated they are distributed to your **POA** – Portfolio of Awareness, also known as your **GOV** – Governance Orchestral Vector.

Calculation: For an Individual Session (“N”) IS(N) , it is determined whether the Individual Session Acknowledgment (**ISA**) has been set aside and stored, if so then the Individual Session Score (**ISS**) is defined to be the integer value 1. If the donation has not been set aside, then the Individual Session Score is defined to be the integer value 0 (Zero).

The Altered Shulgin Scale rating (ASS) for an Individual Session (“N”) is calculated as follows:

$$ASS(N) = ISS(N) + ISS(N-1) + ISS(N-2) + ISS(N-3) + ISS(N-4) + ISS(N-5)$$

The ASS is the simple summation of the current Individual Session Score and the five previous ISS's

Since the ISS (Individual Session Score) is either 1 or 0, the ASS measure assumes the range of 0 to 6. Non Zero values use the “+” notation, such as +1 ASS or +6 ASS, a zero score is referred to as 0 ASS.

The objective is to achieve a +6 ASS for each Individual Session.

Since reliable records of Individual Sessions and the corresponding ISS's have to be faithfully and assiduously maintained to accurately measure the ASS, to achieve +6 ASS requires at least six contiguous sessions where the ISS = 1.

Thus a journal entry for a Session would both record the SSS – the Standard Shulgin Scale and the ASS – the Altered Shulgin Scale. A parenthetical 2-tuple notation suffices: (SSS, ASS).

Either in the form of, for instance (1,0) or (+1,+1), though traditionalists might prefer (++++,0). As you can see it's possible to score (++++,0) or (+4,0) for a session with 0 ASS.

If one tends to consistently score highly on the Standard Shulgin Scale and poorly on the Altered Shulgin Scale, such as (++++,0), (++++, 0) (++++, 0) then one ought to closely examine one's relationship to these peak experiences of Consciousness epiphany.

Of course the notable aspect of the (SSS, ASS) notation for the psychonaut exploring the process of entheogenesis is that the psychonaut or entheonaut elect, is by and large, completely in control of the ASS ratings achieved for any particular session, whereas control of the possible SSS rating is essentially limited to the dosage for a particular psychedelic nuanced by the set and setting and myriad other subtle factors in Consciousness.

The ASS measures the consistency and insistency of the intent and intensity – the “intensionality” – of the psychonaut exploring entheogenesis. In regards to your ASS rating, there are two additional key concepts, the first is “*Polishing your ASS*”. Polishing your ASS refers to your efforts to consistently increase your ASS rating for sessions to be +6 ASS, which is the highest value. The second concept is “*Refining your ASS*”. Refining your ASS does not involve either the calculation of the ASS rating or it’s actual value. Rather it refers to the “*Fine Fractal Feathering*” (**FFF**) of the related GOV or the Governance Orchestral Vector, either in the nuancing of the scalar values of the Active Conscience Interdiction Dimensions (**ACID**) or in the increasing of the number of such dimensions in your Logical Stewardship Design (**LSD**).

One should seek to both polish one’s ASS and to refine one’s ASS in one’s role as a conscious psychonaut or entheonaut or recreational user.

The Fundamental Root Pragma is “Act or Assist”.

Remember the measure of entheogenic qualia for a session is defined as to whether the ISA – the Individual Session Acknowledgment has been made.

THE CONCEPTUAL HALLUCINOGENS

A hallucination about the nature of concepts

The Root or Primary Conceptual Hallucinogen is the hallucinatory concept of “Conceptual Hallucinogen” (“quote-unquote”) itself. The symbolic nomenclature for it is “**CH**” – that is, **CH** and not “**CH**” – though in practice, the CH is not written in the formulaic expression of the conceptual hallucinogens, but is understood and considered to be implicit, since it is at the heart of all the conceptual hallucinogens.

Thus the concept of “Conceptual Hallucinogen” (CH) is a conceptual hallucinogen, in and of itself – indeed “Conceptual Hallucinogen” is a hallucination about the nature of concepts. However the conceptual hallucinogen “Conceptual Hallucinogen” is profoundly subtle and aethereally fine and it’s difficult to get any perceptive, cognitive or insight traction on it’s essential nature.

A far more tractable and concrete conceptual hallucinogen to work with, and the one that will be the sole focus of this chapter is the conceptual hallucinogen analogue of CH known as **EC2C**.

The reader having just been dosed with EC2C will be immediately aware that it’s easy to see that the conceptual hallucinogen CH-EC2C (or EC2C which is the normative notation) is easier to see in it’s effects on the experiencer’s consciousness than CH by itself.

EC2C is also quite subtle and fine, and an mnemonic anamnesis finger-string (MAFS), to assist in remaining aware of its conceptual hallucinogenic nature is the phrase “Error Correcting Clarifying Concept”

EC2C = Error Correcting Clarifying Concept

Let us examine some salient qualities of the “EC2C” analogue family of conceptual hallucinogens, some key aspects of their nature:

- The onset is at the speed of thought.
- The duration is the extent that you are paying attention.
- The cessation, back to baseline, is instant, you simply pay attention to something else.
- There is a high risk of flashbacks, but such does not interfere with your baseline activities or mentation.
- There is a low risk of blowback, there are few, if any, side-effects.
- It is not addictive and it is impossible to overdose.
- There are no issues of tolerance or cross-tolerance, however as with any hallucinogen that is caned mercilessly, familiarity can breed contempt and degrade the inherent signal integrity of the experience.
- The intensity and quality of effect bears no correlation to standard measures of intelligence.
- The intensity and quality of effect bears no correlation to levels of education achieved.
- Whereas many people would never partake of a chemical psychedelic, they may experiment experiencing a conceptual hallucinogen.
- The conceptual hallucinogen, once synthesised properly, is easily replicated and shared.

Please be reminded that these are substantially abridged lecture notes and not the full documentation.

Before, apparently, departing from this brief adumbration of **TASSACH** – The Altered Shulgin Scale And Conceptual Hallucinogens, it is important to note that conceptual hallucinogens have several forms, such as the tabular representation of Acronyms and the psychedelic math semantics representation of lineal numinous equations – all fine and refined lines of black text, on a crisp white page, pure know, insufflated via the optic nerve or the auditory canal...

... EC2C Design Considerations

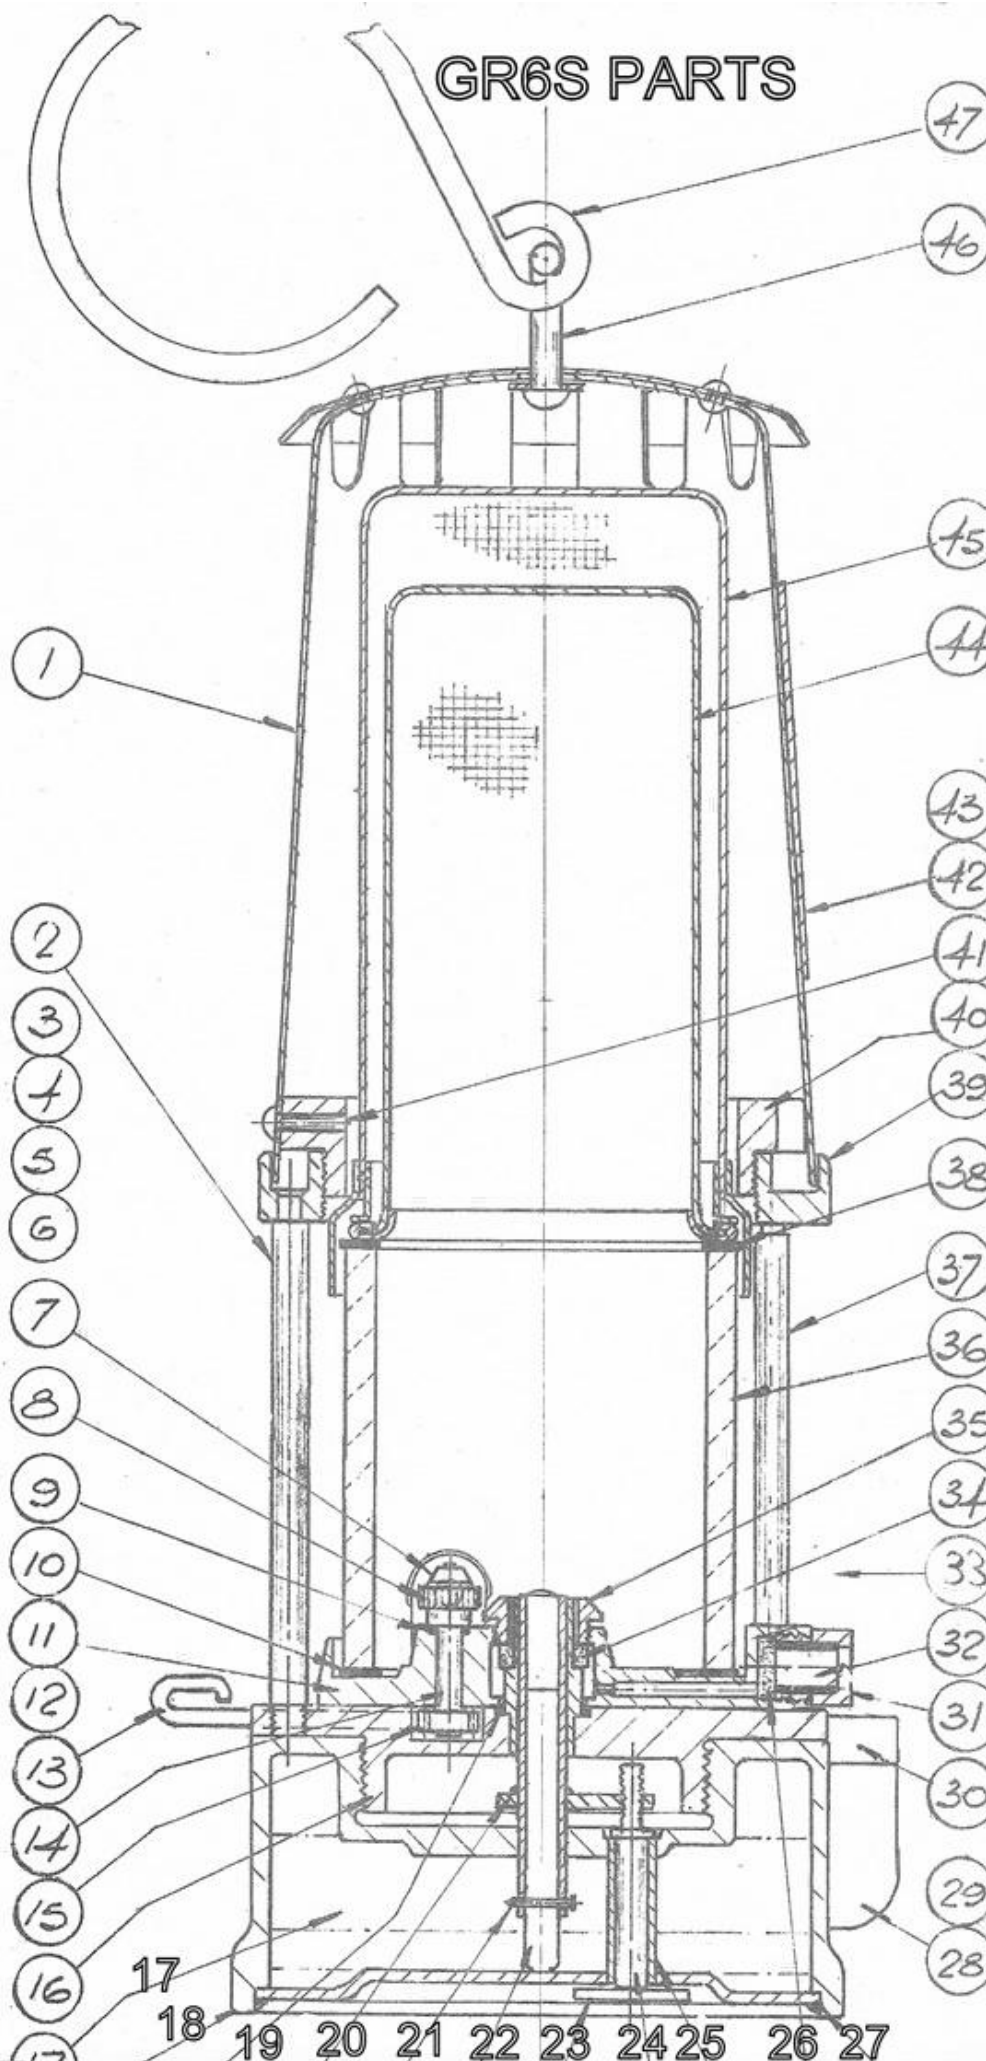

In terms of auditing one’s behaviour as a psychonaut, entheonaut, or a socially and environmentally aware recreational user – in particular examining the punctuated or incremental evolution in the ethical and stewardship ethology of themselves over the course of their lives and the cycles of experiential sessions that weave through that life – it is useful to consider the following quadrant analysis:

Q1: Virtues of Commission	Q2: Virtues of Omission
Q3: Sins of Commission	Q4: Sins of Omission

Omission refers to that which happens as a consequence of not taking action, and commission, the opposite – that which happens as a result of taking action. With reference to Q1 and Q4, the human condition tends to be finite Virtues of Commission and infinite Sins of Omission.

One very practical exercise in directed, targeted entheogenesis is the deliberate exploration of Quadrant Four – the “Sins of Omission”. Such is the nature of individuated human being, that these are infinite. One can use the psychedelic sacraments to explore this vast space, this great oceanic depth, this deep cavern and thus, in particular, refine the Quadrant One – the “Virtues of Commission”, and that can become a cybernetic feedback and correction loop between the diametrical and complementary quadrants...

The Four Foundation Pledges

1. The Inter-Dependent Pledge:

That for the duration of the experience we commit to supporting each other and raising each other's consciousness wherever possible. We commit to being each other's guardians and to surpass each other's level of understanding and to surpass our own.

2. The Intra-Personal Pledge:

That we embrace the experience we are about to undergo with total responsibility and complete authority of being and that we acknowledge that everything that arises is by definition within our being and thus inductable into our awareness and we commit to inducting it.

3. The Sunset Pledge:

That we commit to fully, honestly, and accurately answering up to twenty questions individually from our fellow workshop participants should we have the urge to leave the workshop space before the agreed minimum time communing together in the workshop.

4. The Post-Integration Pledge:

That we commit to fully, honestly and accurately journaling and documenting our experience in written form and that names and places will be encrypted to prevent the ignorant from making nuisances of themselves.

Miscellaneous Metaprogramming

The California Redux Law

"It takes more than drugs to evolve human consciousness."

There have been more psychedelics and entheogens insufflated, ingested, injected, inhaled, inserted, intubated and inrectumated by humanity in the last forty years than in the previous four million and that is just in California alone, however we still collectively appear to be deeper in the shit now than we were in the 1960's.

A standard period of human evolution is the "Kubrick", defined to be four million years. Which was, in the mythos of "2001, A Space Odyssey", the duration between the Monolith first appearing and the discovery of TMA-1 on the Moon. Conflating the concept with Douglas Adam's "Hitchhikers Guide to the Galaxy", four million years is the time from the appearance of the Monolith to the first digital watch.

It has been circa eleven micro-Kubricks since the Psychedelic Revolution of the 1960's, there remains less than one micro-Kubrick until 2012, it will be interesting to see how quickly and to what extent, human consciousness evolves in the time remaining, before the next memetic clarion call.
